# 게시판 구현하기 (검색)

#### header.jsp

실습에서는 게시판(board)에 대한 제목 검색만 진행함 header.jsp의 action 및 method 추가

```
<form action="/board/search.do" method="GET" class="d-flex" role="search">
        <input class="form-control me-2" type="search" placeholder="Search" aria-label="Search">
        <button class="btn btn-outline-success" type="submit">Search</button>
    </form>
```

kr.co.greenart.board.controller.BoardController

searchTxt에 대한 값 추가 및 인자 값 전달

• kr.co.greenart.board.model.service.boardService

인터페이스와 클래스에 searchTxt에 대한 매개변수 추가

```
int selectListCount(String searchTxt);

// 목록 블러오기
List<Board> selectListAll(PageInfo pi, String searchTxt);

@Override
public int selectListCount(String searchTxt) {
    return boardDao.selectListCount(sqlSession, searchTxt);
}

@Override
public List<Board> selectListAll(PageInfo pi, String searchTxt) {
    return boardDao.selectListAll(sqlSession, pi, searchTxt);
}
```

kr.co.greenart.board.model.dao.boardDao

각각의 매개변수를 추가하고 mapper에 searchTxt 전달

```
public int selectListCount(SqlSessionTemplate sqlSession, String searchTxt) {
    return sqlSession.selectOne("boardMapper.selectListCount");
}

public List<Board> selectListAll(SqlSessionTemplate sqlSession, PageInfo pi, String searchTxt)
    int offset = (pi.getCurrentPage()-1)*pi.getBoardLimit();

    RowBounds rowBounds = new RowBounds(offset, pi.getBoardLimit());

    return sqlSession.selectList("boardMapper.selectListAll", searchTxt, rowBounds);
}
```

board-mapper.xml

전달받은 searchTxt를 검색하기 위한 WHERE, LIKE \* SQL LIKE에서의 % → 모든 문자열 (정규식의 \*와 같음)

```
<select id="selectListCount" resultType="_int">
    SELECT COUNT(*) FROM board
    WHERE B_TITLE LIKE '%'||#{searchTxt}||'%'
</select>

<select id="selectListAll" resultMap="boardResultSet">
    SELECT * FROM board
    WHERE B_TITLE LIKE '%'||#{searchTxt}||'%'
    ORDER BY B_INDATE DESC
</select>
```
